

Southeast Brazil

Atlantic Rainforest and savanna

18 October – 6 November 2013

Tour leader: Nick Athanas

Photos by the author unless otherwise specified

This male White-bibbed Antbird was just one of many fantastic antbirds we saw on the tour

Spring in Southeast Brazil is pretty neat. While the birding here is always good, it ratchets up a notch this time a year as the forest fills with song and nesting gets into full swing. We once again had a great tour, recording the highest number of species yet for this itinerary, ranging the tiny **Buff-throated Purpletuft** to some nice raptors like **Mantled** and **White-necked Hawks**, and the striking **Black-fronted Piping-Guan**. Once again antbirds were a big hit, with over thirty species seen well and none "heard-only". Weather was mostly good; a few rainy days are typical in this tropical area, but a couple of very windy days in Rio state were a bit painful. The last morning was a total washout, but luckily we had gotten all the key targets on the previous afternoon, so we could relax a bit.

This year we started the tour in the southern metropolis of Curitiba. Several of the group had arrived a day early, so I arranged a one-day extension to some areas that we wouldn't visit on the main tour. The vast majority of the birds we would find again on the trip, but we made the most of the day and crammed in a lot of birds. It was not an auspicious start when there was no sign of the Canebrake Groundcreeper at a usually reliable spot, and Marsh Tapaculo was a "heard only" despite coming in very, very close to the edge of the wetlands. Luck improved after that, as we had no trouble getting **Parana Antwren** in a little marsh, and also scored the scarce and often tricky **Kaempfer's Tody-**

Tyrant nearby. A few other species that we saw nowhere else on the tour included **Gray-necked Wood-Rail**, **Great Pampa-Finch**, and **White-browed Blackbird**.

Next morning we drove north during the morning to Intervales State Park. This is always a terrific place to start a trip since so many great birds are easier to see here than anywhere else. Despite not arriving until the afternoon, we started nailing endemics and other key birds right off the bat with an easy walk near the lodge. A pretty Dusky-tailed Antbird started things off behind the lodge, along with a pair of Shear-tailed Gray-Tyrants. Soon after, a tiny but fierce-looking Hangnest Tody-Tyrant put in an appearance, and some rude noises announced the presence of an Ochre-faced Tody-Flycatcher, which we tracked down quickly. Walking down to the edge of a little marsh, a pair of rare Black-legged Dacnis showed really well, and a puzzling flycatcher proved to be the tour's only Small-billed Elaenia. After a short search in the reeds, a few **Orange-breasted Thornbirds** came in close for nice views, and Red-and-white Crake was ridiculously easy as it came right out in a little opening, giving the best views I've ever had by far. Bottlebrush flowers were attracting a number of hummers, and we had our first views of a number of the common hummingbird species of the region such as Black Jacobin. Violet-capped Woodnymph, Versicolored Emerald, and Sapphire-spangled Emerald. Other birds we found during the afternoon walk included Yellow-fronted and Green-barred Woodpeckers, Rufous Hornero, Pallid Spinetail, Cliff, Swainson's, and Short-crested Flycatchers, Black-tailed and Black-crowned Tityras. Crested Becard, Rufous-browed Peppershrike, White-rumped Swallow, Creamy-bellied and Rufous-bellied Thrushes, Chalk-browed Mockingbird, tons of tanagers like Azure-shouldered, Golden-chevroned, Green-headed, and Diademed, and Greenwinged Saltator.

Red-and-white Crake at Intervales State Park

During the next two days at Intervales, we explored several other trails and roads that go deep into this huge park. We were accompanied by Luiz Avelino, a superb birder and the park's most experienced bird guide. We had nice weather, spectacular birding and many superb sightings. Colorful and gaudy birds like Spot-billed Toucanet, Red-breasted Toucan, Plovercrest, Blond-crested Woodpecker, Bare-throated Bellbird, Red-ruffed Fruitcrow, Sharpbill, Swallow-tailed Manakin, and Red-necked

and Brassy-breasted Tanagers were perhaps the most memorable, but that only scratches the surface. Black-fronted Piping-Guan is always a key target here, and after missing it for the first day and a half, we finally had some great views of this beautiful cracid. Raptors included a perched Mantled Hawk and a surprise Tiny Hawk at very close range. Nightbirding got us the outrageous Long-trained Nightjar along with some Short-tailed Nighthawks, but owls proved rather difficult, with only Tropical Screech-Owl seen. Other birds seen here include Brown Tinamou. Slaty-breasted Wood-Rail, Barred Forest-Falcon, Maroon-bellied and Plain Parakeets, Scaly-headed Parrot, Pavonine Cuckoo, Dusky-throated and Scale-throated Hermits, Green-backed, Surucua, and Black-throated Trogons, Rufous-capped Motmot, Buff-bellied and Crescent-chested Puffbirds. Ochre-collared Piculet, Rufous-breasted Leaftosser, Planalto and Lesser Woodcreepers, Whitecollared, Buff-fronted, White-browed, and White-eyed Foliage-gleaners, Rufous-capped Spinetail, Tufted and Spot-backed Antshrikes, Ferruginous, Ochre-rumped, and Bertoni's Antbirds, Streak-capped Antwren, Squamate Antbird, Rufous Gnateater, Spotted Bamboowren, White-breasted Tapaculo, Gray-hooded Flycatcher, Sao Paulo, Oustalet's, Bay-ringed, Roughlegged, and Gray-capped Tyrannulets, Eared Pygmy-Tyrant, Brown-breasted Pygmy-Tyrant, Gray-hooded Attila, Large-headed Flatbill, Sirystes, Three-striped Flycatcher, Wing-barred Piprites, Greenish Schiffornis, Chestnut-crowned Becard, Rufous-crowned Greenlet, Brown and Black-goggled Tanagers, Black-throated Grosbeak, Cinnamon-vented Piha, Golden-winged Cacique, and Chestnut-bellied Euphonia.

Tiny Hawk (photo by Richard Yank)

We spent part of the final morning targeting Variegated Antpitta but only heard it (it's never easy) before leaving and driving down the mountains to the coast, spending one night in the seaside town of Cananéia. The coastal forest and scrub, or *restinga*, is home to several very localized species that we would not see anywhere else on the tour. We took a ferry over to another island in late afternoon, where we easily saw several **Red-tailed Parrots**, a flock of noisy **Azure Jays**, and a pair of frenetic **Restinga Tyrannulets**, while from the ferry we saw a number of coastal and seabirds like **Brown Booby** and the "Cayenne" form of **Sandwich Tern**. Neal was lucky enough to see a **Scarlet Ibis**, but the rest of us missed it. We enjoyed a superb seafood dinner in a great restaurant not far from our quiet hotel.

It was a rather wet morning, but fortunately we were down to one main target in the area, **Black-backed Tanager**, which we found without too much difficulty along with **Long-billed Wren** and **Flame-crested Tanager**, so we set off on the long drive to Ubatuba that took most of the rest of the day. We

spent three nights in nice hotel in a quiet suburb of this coastal resort town, enjoying more great seafood and some the best *Caipirinhas* around.

Our two days around Ubatuba area couldn't have been more different. The first was clear, hot, and humid. We started in the Angelim reserve, where the wide, forested tracks and clearings make the birding easy productive. We had nice sightings of key targets Pale-browed Treehunter. like Orange-eyed Thornbird. Unicolored Antwren, Ferruginous and Scaled Antbirds. Black-cheeked Gnateater. Fork-tailed Pygmy-Tyrant, Whiskered Flycatcher, and Lemon-chested Greenlet, though the Buffthroated Purpletufts were strangely absent. By the afternoon it was hot and quiet, and we spent some time relaxing in front of Jonas's feeders which are always really active. As usual the Festive Coquettes were a favorite. but we also added a number of new hummers

to the trip list like Saw-billed Hermit, Swallow-tailed Hummingbird, Sombre Hummingbird, Glittering-throated Emerald, and White-chinned Sapphire (above). A few colorful passerines came in to eat bananas including Violaceous and Chestnut-bellied Euphonias, Green-headed Tanager, as well as the tour's only Green Honeycreeper. Later in the afternoon it still really hadn't cooled down much, but set off into the rather quiet forest anyway. Eye-ringed Tody-Tyrant was calling, and it took a rather major effort to see it, going way off the trail and around a fallen tree. Everything else seemed to be silent, so it was worth the extra time. Later on, we also finally spotted a Slaty Bristlefront on the ground by the side of the track. We stayed out late to look for Black-capped Screech-Owl, but even though it was singing just after dusk, it never came in close.

Green-headed Tanager

Clouds built up through the night, and by morning it was cool and rainy. We decided to target **Buff-throated Purpletuft**, probably the most wanted endemic species from this region. The rain picked up as we arrived at a small camping area not far from Angelim, but there were plenty of areas where we could bird from under shelter. There was quite a lot of activity around the camp, and there was plenty to see while we waited including **Green-backed Becard**, **White-thighed Swallow**, **Sick's** and **Gray-rumped Swifts**, **Pale-vented Pigeon**, **Squirrel Cuckoo**, **Masked Water-Tyrant**, **Piratic Flycatcher**, **Yellow-legged Thrush**, and **Fawn-breasted Tanager**. After a while we finally did see a single purpletuft perched up on top of a dead tree. We decided to return to Angelim; the rain didn't get any better, but we were fortunate to see a family of three **Robust Woodpeckers**. The rest of the day was mostly a washout. We ended up back at Jonas's place where we could see birds and stay dry, spending some time taking photos of the hummers like this **Black Jacobin**.

Black Jacobin

We left Ubatuba, heading east and fortunately out of the rain. We had a great morning of birding north of Parque Mambucaba (formerly Perequê), finding the endemic Black-hooded Antwren at our very first stop. Birding at various spots along the road, we added various other species like Yellow-eared Woodpecker, White-barred Piculet, Channel-billed Toucan, Rufous-tailed Jacamar, Chestnut-backed Antshrike, Black-capped Foliage-gleaner, Yellow Tyrannulet, Orange-headed Tanager, Black-throated Grosbeak, and better views of Fork-tailed Pygmy-Tyrant. Later in the morning, the sun came out and raptors started coming up. A Black Hawk-Eagle flew by close overhead, and we hit the jackpot with a pair of the endemic White-necked Hawk that rode thermals up over a ridge. We drive through the middle of the day to REGUA (Reserva Ecologica de Guapiassu), where we spent three nights in their lovely lodge. We had an easy walk around the nearby wetlands in the late afternoon, finding plenty of birds along with Capybaras and Broad-snouted Caimans. A few of the new species for the trip included White-faced and Black-bellied Whistling-Ducks, Brazilian Teal, Capped Heron, Greater Ani, Wing-banded Hornero, Yellow-chinned Spinetail, White-headed Marsh Tyrant, Black-capped Donacobius, Yellow-backed Tanager, and Chestnut-capped Blackbird.

Fork-tailed Pygmy-Tyrant

What seemed like a beautiful morning changed quickly as we arrived at the start of the forest trail we would spend most of the day birding. Around 7 o'clock, the wind suddenly picked up and came blasting down the mountains, shaking the trees violently back and forth and sending virtually all birds to shelter. It was by far the most challenging day of birding of the tour, and we no doubt missed a few species because of it. We certainly had some good birds, just not as many as you normally would expect, and there were long periods of nothing. Some of our more interesting sightings included **Ochre-breasted Foliage-gleaner**, **White-flanked Antwren**, **Pin-tailed Manakin**, **Brown-winged Schiffornis**, **Yellow-green Grosbeak**, **Ochre-bellied Flycatcher**, **Southern Antpipit**, **Black-capped Becard**, **Yellow-eared Woodpecker**, and **Lesser Woodcreeper**. After the tough hike, we returned to the lodge and mostly just relaxed and watched the feeders, seeing a new trip bird, **Rufous-breated Hermit**.

We departed early next morning on a day trip up to Pico da Caledônia in the mountains above REGUA. Once again, the winds kicked in at almost exactly 7:00am, making the early morning hours a struggle. We did manage to see a beautiful Large-tailed Antshrike before fog enveloped the mountain, and we retreated to lower elevations. This was a good idea as we quickly found a singing Black-and-gold Cotinga that showed really well. We birded another road for a while, waiting for the weather to improve, finding Sharp-tailed Streamcreeper, Spix's Spinetail, and Cinnamon Tanager, before finally the wind stopped and the top of the mountain came into view. We drove back, having better luck this time with Serra do Mar Tyrannulet, Rufous-tailed Antbird and Blue-billed and Velvety Black-Tyrants. A Gray-winged Cotinga was singing fairly close by, but despite a rather long vigil, it sadly never revealed itself. We returned to REGUA and had a nice afternoon walk in the forest and wetlands near the lodge, successfully targeting Sooretama Slaty-Antshrike and Moustached Wren. Sooty Swifts showed exceptionally well as they flew low over the water, while a gorgeous male Frilled Coquette was and unexpected surprise. We added a few others like Yellow-breasted Flycatcher and Buff-throated Saltator before calling it a day.

We left Regua and the bad weather behind, having a great couple of hours on the beach before we went on to Itatiaia. We weren't exactly swimming and sunbathing, instead searching the coastal scrub and lagoons for a few key species. The critically endangered endemic **Restinga Antwren** didn't take long to find, and we also saw **Purple-throated Euphonia** and **Rusty-margined Guan** nearby. **Manx Shearwaters** were flying not far offshore, and some nearby lagoons held **White-cheeked Pintail**,

Black-necked Stilt, various wintering shorebirds, Gray-hooded Gull, and Little Blue Heron. Later, we headed back west, crossing the Niteroi bridge giving us some nice views of Rio de Janeiro, and drove back up into the mountains to Itatiaia. We were welcomed to the national park by a responsive Half-collared Sparrow at the gate, then headed up to our hotel, the very nice and scenic Hotel do Ypê. Several photographers were clustered around a tree as we were checking in, and they pointed out a perched Frilled Coquette (photo below). We spent the afternoon around the lodge and some nearby trails, where, as usual, the Dusky-legged Guans were ridiculously tame. The trails were rather quiet, though we did finally get to see Olive-green Tanager, which had been surprisingly scarce up until now, as well as more Brown Tanagers and a Uniform Finch. Returning to the lodge at dusk, we watched a pair of Blue-winged Macaws fly in from a long way away, then marveled at their aim as they dove into a tiny hole in a dead tree without even slowing down! Later that evening, a Tawny-browed Owl put in a brief appearance, though unfortunately not everyone was there to see it.

Frilled Coquette

Brown Tanager

Thick fog blanketed the slopes of the mountains as we had breakfast the next morning, and it felt like it might be a struggle to see much of anything. We needn't have worried as it turned out to be one of the best days of the tour. First we waited for the Bluewinged Macaws to come out of their hole, and this time actually got some decent views. The fog cleared a little, and we got to see a few Saffron Toucanets atop a nearby large tree. We headed down the steep road and started along a forest trail. A Such's Antthrush was singing on the other side of a bamboo thicket, so we decided to go in and look for it. A large shape flew up as we crashed through the bamboo, and to our surprise a Tawny-browed Owl (right) was gazing irritably down at us; a great view and especially lucky for the one who missed it the previous evening... Of course this distracted us from the antthrush for a while, but with a bit of playback it finally came in and gave nice views. Continuing on the trail we had steady stream of nice sightings such as Black-billed Scythebill, White-

shouldered Fire-eye, White-browed and Robust Woodpeckers, Drab-breasted Pygmy-Tyrant, Tropical Pewee, and amazing close-up views of a White-bibbed Antbird, whose photo headlines this report. The trail got a bit steeper, but our efforts were rewarded with a superb White-bearded Antshrike, a scarce species that we had seen poorly at Intervales. Soon after, a Speckle-breasted Antpitta started singing, and with patience we called it very close, though you had to be looking at the right hole to even get a glimpse; some of the group missed it, myself included! We'd have another shot tomorrow. Immediately on the heels of the antpitta, a Rufous-tailed Antthrush came in, and this one was not shy at all, so we all got to see it as it marched back and forth on the forest floor.

After lunch, we tried a spot where I had seen Slaty Thrush the previous year. There was no sign of it, but we did run into a mega flock with, among other things, several gaudy Gilt-edged Tanagers, a spectacular male Rufous-headed Tanager. Streaked Xenops, and various woodcreepers. Next we birded around an abandoned hotel, Swallow-tailed hopina for Cotinga, following up on a tip from one of the workers at the Ypê. Luck was with us that day as Neal soon spotted one, then another soon after, perched up near the hulking building that now houses only bats and birds. There were plenty of other things to see around the hotel, including our best views of Variable Antshrike (left).

The following morning we packed our bags and headed for the upper side of the park along the Algulhas Negras (Black Needles) road. It was a beautiful morning and we made the most of it. One of the top birds here is the odd Blackcapped Piprites, which can sometimes be hard to find. Not today, as it was just about the very first bird we got, and we saw it even better a little later. That first rush of birds also included Buff-throated and Bay-chested Warbling-Finches. Mottle-cheeked Tyrannulet, **Brassy-breasted** Tanager, Thick-billed Saltator, Rufous-tailed Antbird, and Rufous-backed Antvireo. We spent some more time of Speckle-breasted Antpitta, and this time one came in close to the edge of the road giving great views for all. We drove up the road, stopping at a big Plovercrest lek, enjoying terrific views of this handsome hummer; the ones here had green crests, unlike the blue-crested ones we saw earlier in the trip. Next up we looked for Itatiaia Spinetail at usually reliable stakeout. Not so today, as it gave very poor views, though there

were plenty of **White-crested Tyrannulets** about. The spinetail is super-common up here though, and we ran into another one later on while we searched for **Araucaria Tit-Spinetail**, and we saw them both. As we were having a picnic lunch, fog enveloped us in a thick miasma, and we could hardly see even a few feet in front of us. We had gotten pretty much all the key targets, so it was a good excuse to go and relax a bit in our rather opulent hotel near the start of the road. The fog continued the rest of the day, though we did make an attempt at birding late in the afternoon; **Rufous-capped Antshrike** was about the only thing we saw apart from the many **Velvety Black-Tyrants** and **Blue-and-white Swallows** around the hotel.

Velvety Black-Tyrant

The fog remained with us next morning, but we had some great luck nailing a couple of key species at literally the 11th hour, finding **Great Antshrike** and **Sharp-billed Treehunter**, two species we would have no more chances to see the rest of the trip. The weather cleared during breakfast, and it was nice to see some of the scenic view before departing for the rather long drive north to Serra da Canastra. We broke the trip up with some short stops to see **Firewood-gatherer**, **Streamer-tailed Tyrant**, **Hooded Tanager**, **Stripe-breasted Starthroat**, **Fork-tailed Woodnymph**, **Sooty-fronted Spinetail**, **Red-legged Seriema**, **Yellow-rumped Marshbird**, and others before arriving at our hotel.

The Serra da Canastra area is perhaps most famous for being the world's stronghold for Brazilian Merganser; the vast majority of the remaining population of this endangered species occurs either in or near the national park. Sadly, luck was not with us this year, and despite a fairly intensive effort, we didn't manage to find any. While I have seen it on most of my trips here, I do occasionally miss them. Another birding group that was around at the same time also didn't see it, yet I did manage to find one a few weeks later on a different tour. Despite this major "dip", we saw a tremendous number of other great birds during our two days here, and it was well worth the trip.

On our first full day, we concentrated on the area at the base of the Canastra plateau. There are a lot more accessible places to check the river for mergansers, and the variety of habitats, including farmland, cerrado, and gallery forest, always makes for a big day list. The Casca D'Anta waterfall is also an impressive sight. Here's a list of some of the birds we saw around here: Whistling Heron, Buff-necked Ibis, Black-chested Buzzard-Eagle, Aplomado Falcon, Yellow-chevroned Parakeet, Great Dusky Swift, White-eared Puffbird, Narrow-billed Woodcreeper, Rufous-fronted Thornbird, Pale-breasted Spinetail, Black-capped Antwren, Brasilia Tapaculo, Plain-crested Elaenia, Sooty Tyrannulet, Yellow-browed Tyrant, White-throated Kingbird, Helmeted Manakin, Plush-crested Jay, Yellowish Pipit, Flavescent Warbler, Chestnut-headed Tanager, Blue Finch, Plumbeous Seedeater, Dubois's Seedeater, Black-throated Saltator, Grassland Sparrow, Chopi Blackbird, Giant Cowbird, and Variable Oriole.

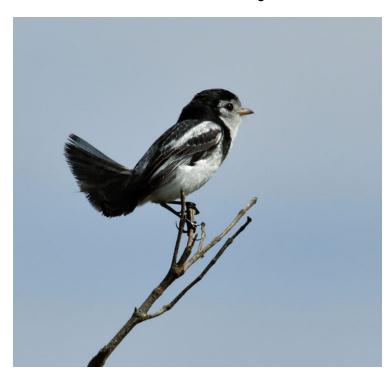

White-eared Puffbird

Birding the vast grasslands on top of the plateau is a completely different experience from anything else on this tour. As the park doesn't open until 8am, we spent some time in the *cerrado* before the gate, easily finding the handsome **Collared Crescentchest** and **Rufous-winged Antshrike** amid a horde of **Lesser Elaenias**. Pygmy-owl imitations brought in an impressive mob of small passerines including our first **Pileated Finches**.

Collared Crescentchest

We worked our way up the terrible road into the tall grasslands, stopping whenever we spotted something. Species numbers up here are low, but what you do see is totally different. Our first stop got us nice views of **Tawny-headed Swallow**, both flying and perched, as well as a singing **Black-masked Finch**. Later, we walked out into the grasslands to a stakeout for **Ochre-breasted Pipit**, flushing up a

Spotted Nothura as we went. The pipits were giving their distinctive display flights, fluttering up and then spiraling down head first to the ground, only pulling up right at the last moment. Continuing along the road, Cock-tailed **Tyrants** were absolutely everywhere, the males were performing their own unique display flights, zipping back and forth over the grasslands like tiny black and white model airplanes. We stopped to look at a flock of Stripe-tailed Yellow-Finches, and nearby some diminutive Sharp-tailed Tyrants clung to tiny stalks while Sedge Wrens chattered away in the grass. Eventually the tortuous road ended at the top of the same waterfall that we had visited yesterday. We shared our lunch with the Chopi Blackbirds, then walked along the river a bit hoping in vain for some Brazilian Mergansers. I decided to hop across the river on some rocks, thinking I would get better views of the river on the other side.

Walking up through the grasslands, I got my biggest surprise of the tour when a male **Sickle-winged Nightjar** flushed up from my feet and soared down the hill, vanishing near the edge of the river! A lifer for me, but I was alone... A few steps later, and a second nightjar took off, this time landing on a branch above the ground. It was the female – certainly not as striking as the male, but at least it stayed put, and everyone got across the river safely to see it. As we started heading back along the road, we ran into the other birding group; their leader, Richard Raby, kindly told us about big flock of seedeaters a few miles farther along. We tracked them down, and among the hundreds of **Plumbeous Seedeaters** were dozens of **Pearly-bellied Seedeaters** and one lone rare and beautiful **Rufous-rumped Seedeater**, a great find. On the way back to the hotel, we had a couple more great birds including **White-rumped Tanager** and **Gray-backed Tachuri** to round out a long but memorable day.

We left Canastra and headed back east on the long drive to Caraça. A short roadside stop a few hours into the trip got us a flock of **Bare-faced Ibis**, before finally reaching a small suburban park near the city of Belo Horizonte in late morning. The tiny patch of forest here has hosted a family of **Three-toed Jacamars** for many years now, and once again these energetic little birds came in and showed nicely. We also saw **Great Antshrike**, **Little Woodpecker**, and **Gray-eyed Greenlet** before driving the rest of the way to Caraça. This old monastery with its imposing church looks rather out of place among the surrounding rocky peaks and stunning scenery. It has now been converted to a lodge, museum, and nature sanctuary, but has perhaps become most famous for the **Maned Wolves** that come to feed on chicken put out for them on the church steps nearly every night. Our afternoon walk got us some glimpses of **Serra Antwren**, a flock of **Biscutate Swifts**, and a **Gray-bellied Spinetail**, which had eluded us everywhere else on the tour up until then. A lone wolf came in nice and early, giving us a chance to get to bed at a reasonable hour.

Maned Wolf at Caraça

Next morning, we went out before breakfast, first stopping to see a **Blackish Rail** in a little duck pond near the lodge. A **Planalto Hermit** buzzed us while we were watching the rail, one of only a couple we saw on the whole tour. We spent some time on the trails, managing to get some better views of the **Serra Antwren** and also finding some singing **Pale-throated Pampa-Finchs**. After breakfast, we headed off to our last destination of the tour, the Serra do Cipó, stopping en route to try a stakeout for **Pale-bellied Tyrant-Manakin**. It was not very cooperative, and I think only one or two of us saw it

before it vanished, but we did at least get a few **Mouse-colored Tyrannulets**. After a quick lunch and a moment to drop our bags in the lodge, we headed up the mountains to take advantage of the dazzling afternoon. We quickly found a dapper **Hyacinth Visorbearer** feeding in a flowering bush, soon followed by a **Horned Sungem**. Clouds were starting to build, so I decided we should take advantage of the good weather and make a final assault on the mountain for the very localized **Cipó Canastero**. It took us around 40 minutes to get to the spot, and we heard one singing as soon as we arrived. We waited... and waited... and waited some more, until we all had the sinking feeling we were going to have to do the hike again tomorrow. Finally one came out and sat out at the highest point on the ridge and sang its heart out before scampering along the ledge, disappearing and appearing again as it ran through nooks and crannies of the rock face. It is "just" a little brown bird, but it's fun to see, and the surroundings are magnificent. On our way back to the van, we also managed to find a **Hellmayr's Pipit** perched up on a rock in the grasslands, and then scored the tour's last endemic when Morten excitedly pointed out a pair of **Cinereous Warbling-Finches** in a bush.

Hellmayr's Pipit

The sky was now an ominous dark gray, and the **Least Nighthawks** came out extra early, flitting low over the grasslands. We were hoping to get one more bird before the heavens opened up: **Spot-tailed Nightjar**. I thought we were out of luck when a steady rain started just as the birds started to sing, but we just did manage to see one flying around in the spotlight before the rain picked up and we beat a hasty retreat to the van and a nearby a restaurant.

The last morning was pretty much washed out – luckily the previous afternoon had been fantastic so we really didn't miss much because of it. We made a valiant attempt at birding, and even managed to find one last cool bird, the shrike-like **White-banded Tanager**, before giving up and heading back to the lodge to get ready for our long flights home.

A few last gratuitous photos:
